Belton lake tx fishing report

Proper Link: Fishing Regulations | Opportunity Angle | & Protection; Structure | & Tips; ADVISORY BOT TACTICS: Zebra mussels have infected this tack! CLEAN, LONGKANG AND DRY bots, tralers, livewells/baldi bait, and other gear before going to another body of water. Water copying required by law and the ownership and transport of zebra mussels is unlawful. Lay Access Facility Location: On the Leon River at Bell and the Cayley area, 5 km northwest of Belton Town off FM 317 Surface Area: 12.385 acres Maximum depth: 124 feet Impounded: 1954 During lake level conservation pool elevation: 594 feet. msl Up and Down: 3.5 feet Normal Clarity: United States Army Corps Single Engineers 3740 FM 1670 Belton, Texas 76513 25-4039-2461 Very rare And Cattail Lake Records During Stockings Report Recent Review History Contact local handling stores or marinas All game fish are now straightened under state regulations. Belton's task is a popular bag for hybrid-line bass, and can also be a good big bass bag at certain times of the year. Species Foot Pair Brilliant Bass Smallmouth Bass Smallmouth Bass Crappie White Bass Hybrid Sunfish Live Most coastlines are very steep, rocky habitats. Majestic high bluffs and long rocky dots are the most common, although sand and mud share houses can be found on the River Leon and cowhouse areas. It has little or no aquatic say. Balak wood is also limited. Besarnouth bass fishing is the best from late February to April. When the water temperature begins to rise, the bass becomes more active and ready for future spawning. The back of creeks and coves, protected from northerly winds, provides the warmest water in the region. Good creeks to be aware of are Cedar, Bear, Owl, Stampede, and Cowhouse. Spinnerbaits, plastic lizards, jerkbait, and a combination of jig and pork are the bait of choice. From May to September search by main point and shore house next to the creek channel. Stickbaits, chuggers, buzzbaits, crankbaits, and plastic worms can all be productive under the right circumstances. From October to December, bass can be captured from the same area as during the study. Smallmouth bass are usually caught from dams into the Cedar Creek area in the mid-lake. Early spring and late fall, when water temperatures range from 55 to 65 degrees, are prime times to target smallmouth. Spawning takes place within rocky rocks protected from northerly winds. In summer and fall, long, slow, rocky eye cerum is a good area for fishing. Deep crawfish-colored crankbaits, stickbaits, chuggers, buzzbaits, grubs, and small jigs are usually the most productive. The palmetto bass was introduced to Task Belton in 2013 1977, and has since become a very popular sportfish in the reservoir. Hybrids tend to travel in schools across major lakes. They can be caught fishing down with live bait as well as jig trolling and crankbaits, with or without downriggers. White bass fishing was the best from March to May when they migrated to the lake to Leon River to veil. Banks or fishing boats from Highway 36 north bridge to Nell Mother State Park using small jigs or spinners can be very productive. During summer and fall, white bass sometimes school on the surface. Try fishing for a white crappie between late February and mid-May, when the crappie moved into shallow water on the back of the creek and protected the main lake police. Seaming crappie is quite easy to catch on live minnows or small jigs fishing around the stumps and covers sink in 2 to 5 feet of water. In summer, fall, and winter, crappie can be caught around a large isolated tree and brush sinks at 5 to 20 feet. Catfish can be caught all year round. Channel cats spend from May to June, where they travel into the water 2 to 5 feet away behind the creek or along the innings not far from the river channel. Coons, leathers, blood bait, and stinkbait all work just fine. Blue catfish, especially large blues, can be targeted in the winter months, February to April. While long limits and bags across the country apply, editing should consider returning the blues larger than 10 lbs as it consists of a majority of the seam population. Smaller blues are also better at eating than bigger fish! Page 2 of Lake Fisherman Community (CFL) is a public prosecution of 75 acres or smaller located within the limits of an incorporated city or public park, or any death penalty entirely within the boundaries of state parks. These small lakes are subject to special regulations on catfish and fishing equipment. Visit our online stocking reports for your local lake stocking history. Big Bend | Gulf Coast | Hill Country | Panhandle | Pineywoods | Prairi | Prairie | South Texas | FISHED WITH: Last Friday morning, Nov 27. I was fishing with TJ Watson of 17-year-old Ben. TJ's mother, Jennifer, contacted me about 3 weeks ago hoping, despite my full calendar, that she could get her son out on the water with me during a Thanksgiving break from New Tech Belton high school. I initially had nothing to offer it, but, when the sonar training session fell through because of the lack of repair parts that my client needed, I sent Jennifer texts back and today managed to get out was the result. TJ's plan was to graduate from high school, spend 2 years in a junior college, then moved to a 4-year school to pursue degree lessons in law enforcement in preparation for a career as a game warden. PHOTO CAPTION #1: TJ Watson Belton landed white bass, large bass, and freshwater drums using vertical tactics in underwater, amassing the total catch of 127 fish on the right at 4 hours above the water. WHERE WE FISH: Lake Belton WHEN WE FISH: Friday (AM), November 27, 2020 HOW WE FISH: As the northern winds continue to blow and the cover of the grey clouds, to the point of continuous light rainfall, we enjoy light traffic and stellar fishing in Lake Belton. We fish this 5 area and see what has been a highly predictable pattern of fish behavior during the first 4 hours of sunshine following sunrise - increased slow nutritional activity in the first year, peak nutritional activity in the middle of two hours, followed by a relatively rapid closure of nutritional activity in the last half of the fourth hour following sunrise. This feeds the final time of flexes with the brightness of the sky. I'm fishing side by side with TJ this morning as we shared a view on a single Garmin LiveScope monitor to present the bait accurately to certain fish that we saw using that technology. We worked chatters MAL Lures both at the bottom for bottom-oriented fish as well as past hung fish to tempt both. With the final water temperature of November still around 64F, this fast and highly productive fishing should continue for the foreseeable future. See MAL Lure here: See a video tutorial on how to work MAL Lure here: TALLY: 127 fish caught and released OBSERVATIONS: Two episodes of light gull activity took us to some of the fish we boated this morning towards our ending journey. Collins, Co. As I watched my crew make their way from the parking lot to the courtesy dock, my first comment was (only half joking). It looked like someone didn't get the mail. It was 50F and cloaked with a shot of the northeast wind, and Tim wore shorts and a hoodie. I have 5 layers on my torso. I expressed my concern but, Tim insisted he wasn't feeling the bite, sharing that he sometimes golfs with snow fell in Colorado. With that in, we headed out to hunt for fish. PHOTO CAPTION #1: This is the crew Monday morning, from left: Rick & Sean Snelgrooves, Grant Kim, and Tim Man in Shorts Webster. PHOTO CAPTION #2: Tim took this nice 8-pound bluegill in -47 feet of water. Most of Tim's previous experiences have been fishing in saltwater on the Texas coast, or chasing trout in Colorado and the Wyoming stream. He was a quick person learning and took MAL Lure's tactics easily. PHOTO CAPTION #3: Sean came up with a small underwater from the same area where we took bluecat. Many colors have a wide variety of fish that are drawn to the area. WHERE WE FISH: Lake Belton WHEN WE WERE FISHING: Monday (AM), November 23, 2020 HOW WE WERE FISHING: Despite having fished my whole life, I was still excited when we got a combination of grey and wind cloud cover, only knowing that feeding the fish out there to be found. This morning, although the wind gusts have eastern components, it still moves the water, and the grey cloud cover gets stuck throughout the morning. Since I was fishing almost daily but Sunday and Thursday since coming home from Alaska in mid-September, I was able to compare/different today fishing influenced by the eastern wind, with fishing in the days with winds from the other direction. I find that although the fish are willing to bite, they will flavor soon after we get our performances to them, go strong for a while, then cool down faster than with the southern or western winds. Therefore, on a 4-hour journey today, we moved more (6 stops in all), while I've been able to accurately make a solid 4-hour journey with just 3-5 stops under better wind conditions. I also state that we have more fish passing on our straight because they set out, thus having to work harder to catch a number of fish. Again, 100% of our catches taken at MAL Lure this morning, in fact, I didn't bring any other stick because I was very confident that without major changes in the weather and with water temperatures still stable, the intent of the fish in MAL Lure would continue. In all, we landed 155 fish using smoking tactics in conjunction with Garmin LiveScope. Once everyone got the basics of MAL Lure taking it down, I then introduce LiveScope to make them more efficient by looking/knowing when to take short and when to take a long time, based on fish reactions to their performances. It was a good day and, I was surprised, Tim's lips didn't have a blue tint especially to them by the time he was ready to pack them around some of Miller's Smokehouse fries following the trip. David contacted me about three weeks ago and told me he had a special request. He wants to go fishing with Warren, but because of some health concerns, they can't tolerate too much wind, too much cold, and, there are also concerns about starting and releasing boats. Finally, David only wants to stay for about 2 hours. I told David I would try my best to find a set of predictive weather conditions that would allow us to consider all those things and still catch fish. By last Monday it was clear that the weather would be pretty stable throughout the week that we would be able to fish (and catch) today, and, which turns out to be the case. I met friends at the Arrowhead rafting, because I was the only one who had a nice floating life on the courtesy dock without stairs to climb. I ease David a bit once he and Warren are on board about how he started a lot of his statements with the phrase, "When you age us... So, at some point I asked exactly how old she and Warren were. Both fellows are 78 this year. I then told them a story about celebrating my mother's 70th birthday with her at the Olive Garden restaurant in Killen. The whole family gathered around in the evening, my mother asked me to pray for our meal. I told him I would happily do that, but, before that, I wondered if he had any words of wisdom for his family, given his age and life experience. Mum thinks for half a second and say, Kids, let me tell you, get 'long not for wimps! Now, Robert, you'll please pray for us. PHOTO CAPTION #1: This was my Friday afternoon crew - 78-year-old U.S. Army veteran David Doell (left) and Warren Forkin. PHOTO CAPTION #2: These are the fish we end the journey with, David and Warren wanted to end up on a good note, so we wrapped it up after Warren got this one on the lake. WHERE WE FISH: Lake Belton WHEN WE FISH: Friday (PM), November 20, 2020 HOW WE FISH: Since David and Warren was only wanted to stay for about 2 hours usually running a 4-hour journey, I started us a little later than usual to fish us in the heart of the evening bite, which later I found was in the middle of the last 2 hours 4 hours leading up to the sunset (therefore, about 2:30 to 4:30PM). Although things are not ideal (I prefer wind and more cloud cover), they are what David and Warren can tolerate. We find fish in three separate, separate areas, 19 fish at our first stop, 18 fish at our second stop, and 7 final fish at our last stop. Each location was in 42-49 feet of water, and we used a smoking take back with MAL Lures at each location to catch the fish we landed. Things went well in the third stop we made when Warren's rod bent deeper than the white bass usually bends, and the line starts to come out of the bot (whereas white bass usually stays pretty straight under the bot). As David and I saw, a nice big bass cleans the water trying to shake MAL Lure Warren. We landed that fish, and took a bump of Warren holding it. It is really 4.35L. As I was willing to go back fishing, Nicol told me he thought it would be a good idea to finish a good note with Warren catching a good boss. So, with that, we leave the fish still biting, wrapping it, and returning to the dock. Our tally of 44 fish consists of 43 white bass and 1 large bass. See THE LURE MALL here: See a video tutorial on how TO LURE MALL works here: TALLY: 44 fish caught and released Watch: No helpful bird activities witnessed today. We just need cooler weather and a northerly wind to resist these migrating fish eaters in the south. STATENOTE TODAY: Start Time: 2:30P End Time: 4:15P Air Temp. | Commencement: Altitude 76F: low 0.79 with 24 hours of 0.02 drop and 20 CFS flow through Temp dam water level: low 0.7964.8F Wind Speed & Direction: Wind is SSES-7 all night sky conditions: 25% white cloud cover on Blue Sky Moon Phase: Candle Moon at 33% GT lighting = 5 Wx SNAPSHOT: AREAS LURED WITH GLORY: **Area 344, 19 white based on MAL Lures (SP) **Region 1012, 13 white based on LURES MALL (SP) **Region 150, 7 fish at MAL Lures (SP) Bob Mandelle Full Time, Professional Fishing Guide and Owner Holding Belton Lake Fishing Guide Service, Stillhome Hollow Fishing Guide 254.368.7411 (call or text) Website: www.HoldingTheLineGuideService.com Email: Bob@HoldingTheLineGuideService.com Facebook: www.facebook.com/bobmandelle Twitter: www.twitter.com/bobmandelle #WhiteBassFishing #LakeBelton #StillhouseHollow #BeltonFishingGuide #LakeBeltonFishingGuide #BeltonLakeFishingGuide #stripers #stripedbassfishing #rockfish #sandbass #freshwaterfishing #fishing #bass #bassfishing #whitebass #panfish #crappie #fishingonabout #fishingtackle #fishinglife #fishingsport #fishingaddict #fishingicoftheday #fishingtime #fishinggear #fishingday #Fitec WHO I FISHED WITH: This morning, Friday, November 20, I was fishing with returning customers Jim Downing, Gary Hannemann, and Sally Hardeman, living in the Killen area. Gary lives out in the county in Coryell Co., and Sally has retired to Sun City in Georgetown. Out of three, Jim has come out with me the most, and is the one who aligns with this to my journey at what will be an actor weekend and blast for him. With the weather basically Throughout the week, fish and fishing are predictable enough. The only variation on today's theme is the cloud cover. I have had a thick, grey cloud cover with light fog as we met at 7:30, but, got quickly encrypted, and the cloud cover was still allowed for the enlightenment of the atmosphere, which, in turn, triggered the fish to start feeding just one tad later than the beginning of the week. PHOTO CAPTION #1: This is my Friday morning crew, from left, Gary Hannemann, Sally Hardeman, and Jim Downing. PHOTO CAPTION #2: That's Jim's cousin, whom he calls Aunt Sally from below at 7:30 in City in Georgetown. I didn't notice until posting this photo that he was wearing his tower wallet along our journey - very classy! PHOTO CAPTION #3: This is Jim's weekend cast part... PHOTO CAPTION #4: ... and this is Jim's weekend explosive side on Gary's farm - a nice 11 dollar points. WHERE WE FISH: Lake Belton WHEN WE FISH: Friday (AM), November 20, 2020 HOW WE FISHED: Due to solid conditions, complete with grey cloud cover and southern wind, I graduated on marginal fish activity and I also left the productive area to find more productive areas as soon as the catch rate in the area began to go down. In this way, we are able to fish 6 different areas, and experience a typical normal or stomach-shaped activity catch at each one, with activities rapidly ranging as soon as our first solids appear at the bottom, followed by peaking the constant action of fish, and ending with tapering back to slow fishing. Thanks to water temperatures, which have stalled in the mid-60s, the use of medium-paced tactics still pays huge dividends. Each of the 174 fish we landed was taken vertically working MAL Lure (we used white crossings and chausebaiss) discontinued from the bottom with steady injuries. In addition to the white base, which forms the lion's share of our catch, we also landed 3 legal hybrid striped basses, 2 freshwater drums, 1 large bass, and 1 flat head catfish (yellow). Garmin LiveScope added a significant percentage to our catch today in that outside the fish holding at the bottom, LiveScope reveals a small group of suspended fish move faster in a landing band under the boat. Instead of stopping our intake when it is clear that no bottom-oriented fish chase, we will continue to use some holding turns into this suspended fish to see if they will react and catch up. Often these fish, which may be during patrols for food already, will react positively by chasing and pulling. See MAL Lure here: View video tutorial How to work MAL Lure here: TALLY: 174 fish caught and released OBSERVATIONS: No bird activity helped to be found this morning. We only need cooler weather and northerly winds to push these migrating fish in the south. CONDITIONS/NOTES TODAY: Start time: 7:30A End time: 11:50A Temp. | Start of Travel: Height 63F: 63F: low with a decrease 24 hours 0.02' and a flow of 20 CFS through the dam Surface Surface Temp: 64.8F Wind Speed & Direction: Wind is SSE2 in the sunrise, slowly tapping up to SSE12 ahead of the final journey. Sky State: Cloudless Moon Phase: Candles at 15% GT lighting = 50 Wx SNAPSHOT: AREAS FISHED WITH SUCCESS: **Area B0022C, 12 white based on MAL Lures (SP) **Area B0042C, 51 fish on MAL Lures (SP) **Area B0052G, 139 fish in MAL Lures (SP) **Area B0151C, 42 fish in MAL Lures (SP) **Region 1012, 32 white based on MAL Lures (SP) **Region 1007, 40 white based on MAL Lures (SP) **Area B0055G, 30 white based on MAL Lures (SP) **Area B0052G, 44 white based on MAL Lures (SP) Bob Mandelle Full Time, Professional Fishing Guide and Owner Holding Belton Lake Fishing Guide Service, Stillhouse Hollow Fishing Guide 254.368.7411 (call or text) Website: www.HoldingTheLineGuideService.com Facebook: www.facebook.com/bobmandelle Twitter: www.twitter.com/bobmandelle #WhiteBassFishing #LakeBelton #StillhouseHollow #BeltonFishingGuide #LakeBeltonFishingGuide #LakeBeltonFishingGuide #stripers #stripedbassfishing #rockfish #sandbass #freshwaterfishing #fishing #bass #bassfishing #whitebass #panfish #crappie #fishingonabout #fishingtackle #fishinglife #fishingsport #fishingaddict #fishingicoftheday #fishingtime #fishinggear #fishingday #Fitec
